

ANTI-WRAP™ SHIELD

The **DARF Poly-Shield™** is the latest innovation from Nikkel Iron Works. Made of rugged poly material, it is designed to withstand the rigors of severe weather and harsh raking conditions. The six section reinforced design easily assembles and mounts to any DARF rake wheel. The overlapping configuration of each piece allows the **Poly-Shield™** to securely fit up flat & flush with the rake wheel, leaving no room for hay to get in between the wheel and shield. The front side is smooth and the back side is ribbed for reinforcement & strength. Special additives have been added to the poly to help reduce static discharge that is common with plastic. Patent pending.

The **DARF Poly-Shield™** is available on all DARF Rakes. It is also available as a replacement part item for all DARF & Morrill rakes as well as most older Farm-hand rakes.

See Price Page for more information.

Front side—smooth

Back side—reinforced
